PROGRESSIVE TRACTION LEVER SLICER

up to 250 loaves/hour

**Modena+**: Our new progressive traction lever bread slicer. Ergonomics, design and quiet operation form the basis of this sturdy machine.

**Bread holder**  
facilitates the packaging of the bread  
Left or right

**JAC Flap**  
keeps the loaf intact after slicing

**Crumb collector** accessible by tilting the front cover forwards

Pusher locks in the raised position to simplify refilling with oil (Modena + M).

**"M" system**

**lubrication system**  
The micronised lubrication system invented by JAC oils the blades for cutting bread with a high rye content. This system uses the least possible amount of lubricant (120 ml per 1,000 loaves), and ensures clean slicing and a clean machine at all times.
